NUCLEAR INSTRUMENTS & METHODS

A JOURNAL ON ACCELERATORS, INSTRUMENTATION
AND TECHNIQUES IN NUCLEAR PHYSICS

EDITOR: K. SIEGBAHN - UPPSALA

MASTER INDEX

VOLUMES 21-30

LAST ISSUE OF VOLUME 30

NORTH-HOLLAND PUBLISHING COMPANY — AMSTERDAM

NUCLEAR INSTRUMENTS AND METHODS

A journal on accelerators, instrumentation and techniques in nuclear physics

EDITOR: K. SIEGBAHN, UPPSALA

EDITORIAL BOARD:

J. B. ADAMS (Abingdon, Berks.)	S. KIKUCHI (Tokyo)
F. A. ALSINA (Caracas)	J. KOCH (Copenhagen)
E. AMALDI (Rome)	M. S. KOSODAEV (Moscow)
H. L. ANDERSON (Chicago)	S. LIVINGSTON (Cambridge, Mass.)
K. T. BAINBRIDGE (Cambridge, Mass.)	E. M. McMILLAN (Berkeley)
P. R. BELL (Oak Ridge)	M. G. MESCHERYAKOV (Moscow)
R. E. BELL (Montreal)	P. B. MOON (Birmingham)
H. BRINKMAN (Groningen)	M. L. OLIPHANT (Canberra)
E. H. COOKE-YARBOROUGH (Harwell)	W. PAUL (Bonn)
M. DE HEMPTINNE (Laouvain)	A. S. RAO (Bombay)
A. DE-SHALIT (Rehovoth)	G. SALVINI (Rome)
M. DEUTSCH (Cambridge, Mass.)	P. SAVIĆ (Belgrade)
S. DU TOIT (Pretoria)	CH. SCHMELZER (Heidelberg)
B. S. DŽELEPOW (Leningrad)	R. TANGEN (Oslo)
W. GENTNER (Heidelberg)	D. TAYLOR (Northampton)
F. S. GOULDING (Berkeley)	V. I. VEKSLER (Moscow)
P. C. GUGELOT (Amsterdam)	G. VON DARDEL (CERN)
O. HAXEL (Heidelberg)	O. WERNHOLM (Stockholm)
P. HUBER (Basel)	R. R. WILSON (Cornell)
	S. D. WINTER (Saclay)

INSTRUCTIONS FOR CONTRIBUTORS

Contributions may be sent to the Editor, Professor K. Siegbahn, Institute of Physics, University of Uppsala, Sweden, either directly or through the intermediary of one of the members of the Editorial Board.

Short contributions, less than 1500 words, may be published as Letters to the Editor. Such contributions will be published in a shorter time than regular articles and the proofs of these short articles will be corrected by the publisher.

Contributions may be written in English, French or German but should always, except for the short contributions submitted as Letters to the Editor, have an abstract in English. Name(s) of author(s) should be given on the manuscript as well as the name and address of the institute where the research work has been done. (Proofs will be sent by the publisher to this address.)

Figures should be inked original drawings or (preferably not) glossy prints, ready for direct reproduction. All details should be sufficiently large to show up clearly in the reduced size of the printed figure. All figures should have captions.

Books for review should be sent to Professor Siegbahn.

Objective and descriptive material on endeavours and product developments from the industry for the section "Spotlight on Industry" should be sent directly to the publishers, North-Holland Publishing Company, P.O. Box 103, Amsterdam.

Nuclear Instruments and Methods is published monthly. The subscription price of a volume of 360 pages is \$ 17.00 (130s), postage free.

Subscriptions should be sent to the publishers, North-Holland Publishing Company, P.O. Box 103, Amsterdam, or to any subscription-agent.

Claims for missing numbers should be made within two months, following the date of publication. The publishers expect to supply missing numbers free only when losses have been sustained in transit and when the reserve stock will permit.

© No part of this issue may be reproduced in any form, by print, photoprint, microfilm or any other means without written permission from the publisher.

SUBJECT INDEX

Accelerators and Reactors

Electrostatically focused ion source and its use in a sealed-off d.c. neutron source, J. D. L. H. WOOD and A. G. WALKER	21 (1963)	47
General characteristics of a radio frequency ion-source, A. K. GANGULY and H. BAKHRU		56
Analysis of theory and modelling of a ring-shaped phasotron with spiral field distribution, YU. N. DENISOV, V. P. KRIEVSKEY, V. P. DZHELEPOV, A. A. GLASOV, V. V. KOLGA, A. A. KROPIN, M. KUZMYAK, L. M. ONISCHENKO, V. P. RYBALKO, L. A. SARKISYAN, E. SHVABE, D. P. VASILEVSKAYA, B. I. ZAMOLODCHIKOV and N. L. ZAPLATIN		85
Performance and conditioning of "inverted cone" Van de Graaff accelerating tubes, S. E. HUNT, F. C. CHEETHAM and W. W. EVANS		101
Particle field distribution for weak-, strong- and FFAG-focusing particle accelerators and other nuclear instruments, J. ILIESCU		136
Particle flow faces for weak-, strong- and FFAG-focusing particle accelerators and other nuclear instruments, C. C. ILIESCU		145
Stochastic tracking in the Harwell synchrocyclotron, G. L. SALMON		313
Suppression of non-linear resonances in a relativistic cyclotron, V. V. KOLGA		326
Intensity negative ion sources, K. W. EHLERS, B. F. GAVIN and E. L. HUBBARD	22 (1963)	87
Hydrogen and deuterium target for use with high energy accelerators, J. K. WALKER, J. P. BURQ and V. ROUND		138
Electron capture process in conventional annular machines, L. GONELLA		269
Comparative measurements of yields of D-D neutrons from different targets, M. PAIĆ, B. ANTOLKOVIĆ, P. TOMAŠ and M. TURK	23 (1963)	19
Operation of a high energy cyclotron experiment, H. BROWN		109
Second neutron time-of-flight system for the Harwell 30 MeV electron linac, F. W. K. FIRK, J. K. WHITTAKER, J. BOWEY, K. H. LOKAN and E. R. RAE		141
Al radiation damping in accelerators, F. E. MILLS		197
High-frequency, fixed-field, high-energy accelerator, F. M. RUSSELL		229
Resonanz-Einschleusung in ein Mikrottron mittels eines Resonanzemitters im Resonator, R. W. MÜLLER		235
(t,n) ³ He reaction as a neutron source, W. DEUCHARS, J. L. PERKIN and R. BATCHELOR		305
Production of polarized protons, G. CLAUSNITZER		309
Reduced duty cycle from the Harwell synchro-cyclotron, G. L. SALMON		338
Beam current pulse monitor for linear accelerators, R. W. DRESSER	24 (1963)	61
Investigation of the saturation effects at the particle accelerators, V. EUNEA		74
Beam transport properties in beam transport systems, J. McL. EMMERSON and N. MIDDLEMAS		93
Secondary electron emission from aluminium foils in high energy beam monitors, B. FLANSKOY		172
Neutron recoil in 14.8 MeV energy neutron reactions, J. CSIKAI, MRS. P. BORNEMISZA and I. HUNYADI		227
Structure solution of photonuclear yield functions, B. C. COOK		256
Deuterium target, W. H. EVANS and S. J. HALL		345
Design of a cooling system for D-Ti and T-Ti targets, J. RETHMEIER and D. R. VAN DER MEULEN		349
Injection of electrons into stable betatron orbits, S. J. LUKASIK, K. C. ROGERS, G. W. ZEPKO and G. J. BRUCKER		365
Resonances in electrostatic quadrupoles, D. ORR		377
Thin walled sample holder for liquids, C. D. STRIFFLER and J. M. CARPENTER		395
Injection position and current of an accelerated particle beam, L. HOLCOMB, D. I. PORAT and K. ROBINSON		399
Geometry factors for the determination of total neutron yield from the D(d,n)He ³ and T(d,n)He ⁴ reactions, L. RUBY and R. B. CRAWFORD		413
Electrostatic liquid nitrogen pumping system for particle accelerators, M. K. SALOMAA		477
Selection criteria for a 700 MeV cyclotron to accelerate negative hydrogen ions, J. REGINALD RICHARDSON		493
Physical first-order treatment of dispersive magnetic particle optics problems, H. B. KNOWLES	25 (1963)	29
Beam focusing for isochronous cyclotrons, F. M. RUSSELL		40
Neutron source for polarized protons and deuterons, E. R. COLLINS, H. F. GLAVISH and S. WHINERAY		67
Third order aberrations of an electric strong focusing doublet, H. N. LOEBENSTEIN and A. SPRINZAK		162
Design of a 720 MeV proton FFAG accelerator, F. T. COLE, G. PARZEN, E. M. ROWE, S. C. SNOWDON, K. R. KENZIE and B. T. WRIGHT	25 (1964)	189
Deuterium neutron source for reactor measurements, P. D. LOMER, J. D. L. H. WOOD and R. C. BOTTOMLEY	26 (1964)	7
Neutron radiation d'une cible à l'intérieur d'un accélérateur circulaire, J. ANDRADE E SILVA et G. LOCHAK		22
Effect in charged-particle analyzing magnets, C. M. BRAAMS		83
Radially symmetric magnetic field, L. A. C. KOERTS		152
Control of high current ion beams with low divergence, L. E. COLLINS and P. T. STROUD		157
Electron injection process in the betatron, G. BACIU		173

- Varying the energy of neutron capture gamma rays for studies of photonuclear resonant scattering, G. BEN-DAVID (DAVIS), B. ARAD (HUEBSCHMANN) and I. PELAH
- The preparation of sources of Co^{57} for Mössbauer experiments having narrow unsplit emission lines, A. MUSTACHI A precise digital period meter for a nuclear reactor, C. H. VINCENT, J. B. ROWLES and R. A. W. STEELS

Second, revised edition

RELATIVITY

The Special Theory

by J. L. SYNGE, School of Theoretical Physics, Dublin Institute for Advanced Studies.

- CONTENTS:**
1. The Space-Time Continuum and the Separation between Events.
 2. Introduction to the Special Theory.
 3. Space-Time Diagrams.
 4. The Lorentz Transformation.
 5. Applications of the Lorentz Transformation.
 6. Mechanics of a Particle and Collision Problems.
 7. Mechanics of a Discrete System.
 8. Mechanics of a Continuum.
 9. The Electromagnetic Field in Vacuo.
 10. Fields and Charges.
- Appendices.

FROM REVIEWS: "Synge's discussion of the standard results of special relativity is almost certainly the most penetrating in existence".
Mathematical Gazette

"The explanations are patient and penetrating, and remarkably lucid, often being expressed in the scientific equivalent of words of one syllable. In his preface the author writes that his aim is 'to make space-time a real workshop for physicists, and not a museum visited occasionally with a feeling of awe'. In this he has admirably succeeded".

Quarterly of Applied Mathematics

"The book, written in a delightful manner, is never dull. In fact, here and there, in the middle of a complicated argument the reader comes across a witty and amusing phrase—a rare event in mathematical literature".

Proc. of the Physical Society

"The book is full of wise and modern instances, all eminently quotable if space did but permit. It is cheerful in style, profusely illustrated by diagrams, and beautifully printed".

Nature

1965 6 x 9" XVI + 452 pp., 107 illus. f 43.—; (86 s.)

A new series on

Progress in nuclear techniques and instrumentation

Editor: F. J. M. FARLEY, CERN, Geneva

Volume 1 In this new series internationally recognized authorities will contribute reviews on their subjects of specialization in the field of experimental nuclear physics. The aim of this series is to provide the experimental research worker in the field of nuclear physics as well as the advanced student with up-to-date information regarding the latest achievements in nuclear techniques and instrumentation which were obtained in the important nuclear centres all over the world.

Contents

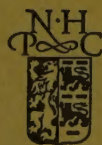

- J. R. Richardson: Sector focusing cyclotrons
- J. M. Dickson: Polarized ion sources and the acceleration of polarized beams
- G. Shapiro: Polarized targets
- R. J. Spinrad: Digital systems for data handling
- H. G. de Carvalho: The processing and loading of nuclear emulsions
- G. Charpak, L. Massonet and J. Favier: The development of spark chamber techniques

6 x 9"
